

Adults with disabilities

One in six people in Australia are estimated to have a disability. People with disabilities frequently report poorer general health, higher levels of psychological distress, and have higher rates of modifiable health risk factors than people without a disability. Addressing these complex health needs can be challenging but GPs are ideally placed to address mental, physical, and preventative health issues, and provide ongoing health education for their patient and/or carers. Knowing how to provide holistic healthcare to the disabled community, support a new application for the NDIS, communicate effectively, engage carers, and liaise with a multidisciplinary team are essential skills for a GP registrar.

<p>TEACHING AND LEARNING AREAS</p> 	<ul style="list-style-type: none"> • Most appropriate methods of communication with a disabled patient, including use of sign interpreters if required • Different types of disability and how they might affect a patient's function • Barriers to taking a comprehensive history or performing an examination for patients with varying disabilities • Role of the Public Guardian • Screening for preventable disease and tailored early intervention • The NDIS - eligibility requirements, supports available and the role of the GP

Adults with disabilities

Clinical Reasoning Challenge

Amelia is a 32-year-old woman who presents as a new patient to your practice. Her mother attends with her who is also her carer. Amelia was born with Down Syndrome and has a mild-moderate intellectual disability. She lives with her mum and works one day a week in a coffee shop that supports people with disabilities. She enjoys participating in dance classes and other social activities.

Amelia is generally very happy and rarely shows signs of distress even when very unwell. She can feed, dress, and shower herself but needs help to plan meals and manage her money. Her mum states Amelia would like to live independently one day.

Her past medical history includes frequent management of ear infections associated with URIs and constipation. She does not smoke or drink alcohol. She takes no current medications.

QUESTION 1. What additional history would help you screen for preventable disease for Amelia? List as many as appropriate.

Amelia's mum said they would like to start a new application for the NDIS.

QUESTION 2. What further information might be important to help support Amelia's application to the NDIS? List up to FOUR important areas of information that you would ask about or seek.

1

2

3

4

QUESTION 3. What TWO types of NDIS supports might be appropriate for Amelia's family to apply for at this stage?

1

2

QUESTION 1. Amelia presents 1 month later having hurt her ankle at dance class. She says has had several falls and sprains in the past which you feel could be due to her lower muscle tone and joint laxity. You feel she would benefit from physiotherapy. Can you apply for NDIS funding to cover this? (Yes/No)

Adults with disabilities

ANSWERS

QUESTION 1

What additional history would help you screen for preventable disease for Amelia? List as many as appropriate.

- Diet and nutrition intake
- Physical activity including weight bearing activities
- Sexual history or intention
- Mood
- Vitamin D intake or sun exposure
- Management of constipation

Amelia's mum said they would like to start a new application for the NDIS.

QUESTION 2

What further information might be important to help support Amelia's application to the NDIS? List up to four important areas of information that you would ask about or seek.

- What specific goals Amelia has
- What other day to day activities are difficult e.g. using public transport, communication, social interactions etc.
- Past specialist or allied health assessments
- Past cognitive assessments

QUESTION 3

What two type of NDIS supports might be appropriate for Amelia's family to apply for at this stage?

- Capacity building: Support or training which would help Amelia build her independence or skills
- Core: Supports that might enable Amelia to complete activities of daily living and work toward goals.

QUESTION 4

Amelia presents 1 month later having hurt her ankle at dance class. She says has had several falls and sprains in the past which you feel could be due to her lower muscle tone and joint laxity. You feel she would benefit from physiotherapy.

Can you apply for NDIS funding to cover this? (Yes/No)

- No: Rehabilitation for acute injuries is not covered under the NDIS and you could consider completing a GPMP/TCA to access physiotherapy for this patient. The NDIS may fund a period of physiotherapy or exercise training to maintain function post rehabilitation or improve the muscle strength and balance issues that are a result of her disability if that is in line with Amelia's stated goals in her NDIS plan.
